Stay Live 2000 is a small application that can maintain the status of your dial-up Internet connection active through various tools. It can be effortlessly installed and configured. The app's interface is made from a common window with an uncomplicated layout. So, you can select the refresh interval for the transmission packets and make the app suspend the transmissions temporarily or to use only the default IP addresses. It is possible to specify the dial-up connection name and time server for the packet transmissions, change the IP and URL address of a time server, as well as to view statistics (server, address, URL, activity time, sent and retrieved packets). Furthermore, you can enable Stay Live 2000 to retain the window sizes and positions, stay on top of other frames, as well as to create a Start menu item, desktop icon or startup folder item. The straightforward software tool is very low-demanding when it comes to the CPU and system memory, so it does not interfere with the runtime of other active processes. It includes a help file and has a good response time. On the downside, the interface could use some improvements in the visual department. Other than that, Stay Live 2000 can be handled by users of any skill level, who want to keep their dial-up connection active throughout the computer's uptime.... Set Up Your Secure Remote Access service in two minutes, then simply connect using your FTP or HTTP client and resume work right away. Why not let one of our experts take care of all the hard work for you? In just three easy steps, you can set up your Internet connection remotely to access, file share, or access a server. You can even be completely sure your files are secure by connecting with a secure private connection. We will setup your ISP's modem to connect to your office or home network, then bridge that connection to a secure connection. The purpose of this article is to show you how to recover the "lost" password using the built in disk recovery feature of Windows Vista. To start, check if your hard drive is the problem. On my HP laptop, only the Reccovery partition and the C: drive had the needed information on it. If the hard drive is the issue, follow these steps: 1. Shutdown the laptop 2. Turn off the laptop 3. Remove the battery 4. Plug the battery 5. Turn the laptop back on Please note: If the hard drive is not the issue, reboot the computer. 1. Open up an elevated Command Prompt window by running 'c:\>' (for example, if you are on a folder, type 'c:\folder>') 2. Type "fsutil dirtyfix c:" - replace C: with the name of your drive 3. Add "Press any key to continue..." at the end of step 2 4. Press the "Enter" key 5. Continue to move through the step by step process, and your main hard drive should appear as it did before it went blank. This is a how to article and should not be taken as advice or instruction to commit fraud or steal information and or commit any other illegal activities. First, and most likely, you have no idea how to do this so stop reading right now. Second, if you have a Windows 2000 Enterprise Server or Windows 2000 Professional you have a limited number of ways to reset the password. First, go to Start > All Programs > Microsoft > Windows Server > Tools and then select the password reset link for your account (assuming you know the email address of the account you're resetting.) If you are using Windows XP, you are out of luck. Unless you want to be a computer illiterate, I recommend finding an IT person to do
